Automated Video Annotation for Conversational AI Training

Challenge

- Our client needed an alternative solution to efficiently manage and annotate over **4000** videos for training their LLM.
- Each video required human-generated prompts and responses.

Do these challenges look familiar when training an LLM?

LOST METADATA

SCALING DIFFICULTIES

QUALITY ISSUES

Solution

Argos Multilingual created the **Video Multi-Turn Conversations Corrector**, a platform that:

Centralized video management, annotation, and quality control.

Automated quality checks with strict rule enforcement.

Enabled large-scale annotation tasks while ensuring consistency.

Result

- Enhanced video annotation management and quality.
- **100%** video metadata integrity maintained.
- All files reviewed, including AI-generated.
- Faster project management and task completion.
- Scalable across linguists and languages.
